

Frequencies have been coordinated for use throughout the State of Oregon for the purpose of developing Local Area and State Relay networks. They are used for links between 911 centers and primary stations. They are used for repeaters for wide area coverage, and interconnecting adjacent operational areas. These frequencies are from part 74 and are licensed to the public radio or television outlet hosting the equipment.

The frequencies that have been coordinated are as follows:

166.250 MHz. VHF Wide area repeater transmit frequency.

455.600 MHz. Up link frequency used from the community to the repeater sites.

450.600 MHz. Additional repeater site transmit link frequency, used from repeater site locations into communities
