

Special Considerations are made for stations that principally broadcast in a language other than English. These second language stations have an audience that relates to that language and emergency messages delivered in that language format have a better impact to those communities. The plan specifies how these messages can be managed and offered to those audiences.

1. **The President's Message:** Unfortunately the president's message offered as an EAN code cannot be delayed. It must be automatically forwarded therefore there will not be an opportunity to translate the message the first time.
2. **Monthly tests:** The Required Monthly Test is an informational text that is designed to inform the public. Delivering the message in the language format of the station will enhance the information.
3. **Emergency Messages:** Any emergency message delivered by the station will have greater impact if delivered in the language format of the station. The station should first weigh the impact of the message as if there is sufficient time to delay the delivery of the message in a second language from what it was originally delivered.
4. **Airing the Message:** To forward an emergency message or a monthly test stations can use their encoders in the following sequence:
 - a. **Send:** Send the header codes and 8 seconds of alert tone.
 - b. **Send:** Do not press this function to deliver the audio message. Instead deliver the message live translated into the language format of the station.
 - c. **End:** Send the End – of – Message codes.
5. **Amber Alerts:** It is recommended that after the first broadcast of a CAE code, that subsequent airing of the information occur during the next three hours. It would be very prudent to repeat these requests in the language format of the station. The station can receive a text of the Amber Alert by two methods. Using the internet, the information will be posted on www.amberalert911.com . Using a telephone the information is available as a voice message by dialing 503-373-7850.
